

Package: pacta.portfolio.audit (via r-universe)

September 9, 2024

Title Functions for Calculating Audit Statistics for PACTA on Capital Transition Monitor

Version 0.0.1.9000

Description These utils include functions that facilitate calculation of useful audit statistics for PACTA on Capital Transition Monitor.

--------------	----------

add_portfolio_flags	<i>Adds flags columns to a portfolio data frame</i>
----------------------------	---

Description

Adds flags columns to a portfolio data frame signifying if each holding has a currency specified, has a valid value, has a valid ISIN, and has matching financial data.

Usage

```
add_portfolio_flags(portfolio, currencies)
```

Arguments

portfolio	A data frame containing a portfolio
currencies	A data frame containing ISO 4217 currency codes and their exchange rates.

Value

A data frame of the portfolio with the flags columns added

calculate_portfolio_financed_emissions	<i>Calculate the financed emissions of a portfolio, by sector and asset type</i>
---	--

Description

This functions takes as input a total_portfolio object, and calculates the financed emissions associated to that portfolio, by sector and asset type. If no real emissions data exist for an entity, a sectoral average is used.

Usage

```
calculate_portfolio_financed_emissions(  
    data,  
    entity_info,  
    entity_emission_intensities,  
    average_sector_emission_intensities  
)
```

Arguments

data	A dataframe, like the total_portfolio object in web_tool_script_1.
entity_info	A dataframe, like the entity_info output of pacta.data.preparation.
entity_emission_intensities	A dataframe, like the entity_emission_intensities output of pacta.data.preparation.
average_sector_emission_intensities	A dataframe, like the average_sector_emission_intensities output of pacta.data.preparation.

Value

A summarized dataset, indicating the portfolios financed emissions, per sector and asset type.

create_ald_flag	<i>A short description of the function</i>
-----------------	--

Description

A longer description of the function

Usage

```
create_ald_flag(portfolio, comp_fin_data, debt_fin_data)
```

Arguments

portfolio	A description of the argument
comp_fin_data	A description of the argument
debt_fin_data	A description of the argument

Value

A description of the return value

create_audit_file *A short description of the function*

Description

A longer description of the function

Usage

```
create_audit_file(portfolio_total, has_revenue)
```

Arguments

portfolio_total

 A description of the argument

has_revenue

 Logical determining if revenue data is included or not

Value

A description of the return value

export_audit_information_data
 A short description of the function

Description

A longer description of the function

Usage

```
export_audit_information_data(  
  audit_file_ = .GlobalEnv$audit_file,  
  portfolio_total_ = .GlobalEnv$portfolio_total,  
  folder_path = .GlobalEnv$proc_input_path,  
  project_name_ = NA  
)
```

Arguments

audit_file_ A description of the argument

portfolio_total_

 A description of the argument

folder_path

 A description of the argument

project_name_

 A description of the argument

Value

A description of the return value

get_entity_info

A short description of the function

Description

A longer description of the function

Usage

```
get_entity_info(dir = .GlobalEnv$analysis_inputs_path)
```

Arguments

dir A string containing the path to the directory where the entity info files should be found, typically the value of the analysis_inputs_path parameter

Value

A description of the return value

get_input_files

A short description of the function

Description

A longer description of the function

Usage

```
get_input_files(  
  portfolio_name_ref_all,  
  project_location = .GlobalEnv$project_location  
)
```

Arguments

portfolio_name_ref_all

A description of the argument

project_location

A character string defining the path to the user's data directory, usually "working_dir" and the value held in the project_location parameter

Value

A description of the return value

`left_join_entity_info` *A short description of the function*

Description

A longer description of the function

Usage

```
left_join_entity_info(data, entity_info, by = "factset_entity_id")
```

Arguments

<code>data</code>	A description of the argument
<code>entity_info</code>	A description of the argument
<code>by</code>	A description of the argument

Value

A description of the return value

`portfolio_summary` *A short description of the function*

Description

A longer description of the function

Usage

```
portfolio_summary(portfolio_total, ...)
```

Arguments

<code>portfolio_total</code>	A description of the argument
<code>...</code>	A catch-all for deprecated variables (e.g. <code>grouping_variables</code>)

Value

A description of the return value

process_raw_portfolio *A short description of the function*

Description

A longer description of the function

Usage

```
process_raw_portfolio(  
  portfolio_raw,  
  fin_data,  
  fund_data,  
  entity_info,  
  currencies,  
  total_fund_list = NULL,  
  isin_to_fund_table = isin_to_fund_table  
)
```

Arguments

portfolio_raw	A description of the argument
fin_data	A description of the argument
fund_data	A description of the argument
entity_info	A description of the argument
currencies	A description of the argument
total_fund_list	A description of the argument
isin_to_fund_table	A description of the argument

Value

A description of the return value
